This course will explore in historical perspective what are considered to be (most of) the major “systems” – i.e., comprehensive bodies of thought – of psychology. Rather than simply being a survey, however, we will examine these systems in order to articulate those fundamental ideas, questions, and philosophical controversies (the mind/body issue, free will vs. determinism, the nature/nurture debate, etc.) that define psychology as an arena of intellectual thought. There is another very basic goal of the course as well; and that is to determine for ourselves whether psychology has been moving in the “right” direction during the last century (especially in its aim of becoming a legitimate science) or whether, perhaps, it has taken some questionable turns along the way. At base, then, there are two fundamental questions that we will try, hard, to answer as best we can throughout this course: Who are we? And: How is the human condition best studied? We’ll be asking lots of others along the way as well.

Course requirements will consist of two series of take-home essays (the first assigned on February 9, due February 20; the second assigned on March 15, due March 26), as well as a final paper or project (which will be due no later than May 8). Each of these requirements will be approximately one-third of your grade. Class discussion, while not figuring directly into your grade, can work on your behalf depending on your level of participation. The most important aims: reading for meaning, a willingness to enter the “thickets” of ideas, and, a desire to think for yourself about the psychological world.

\section*{A Few Words on Academic Integrity}

Here is what I want to say, in the simplest of terms: \textit{the work you do for this course must be your own}. This doesn’t mean that you can’t draw on others’ work or be influenced by it; no one expects “one’s own” work to be utterly devoid of external influence. What it does mean is that the product you create must reflect \textit{your} efforts, \textit{your} efforts, \textit{your} imagination. This will involve proper citation and so on. As importantly, though, it will also involve a moral promise on your part – a promise that you must uphold and enact as you go about your work. \textbf{Please familiarize yourself with the Academic Honesty Policy outlined in the College Catalog. You are responsible for knowing the Policy and abiding by it.}

Academic integrity is not only about honesty, however. It is about preparedness for class, intellectual commitment, openness to new ideas, the capacity to listen to others, the ability to engage in sustained dialogue and debate about important issues, and much more. Let’s work together to create the best possible learning environment.
